

From welcome to ongoing support.

● Green marks a payment step

- 1 Getting started** **START**
Create your account, sign your HIPAA forms, and send your order to your doctor.
- 2 Enroll & your kit ships** **\$499** **DAY 1**
Complete secure checkout. Your at-home gut health kit ships the same day.
- 3 Your forms & sample** **DAY 3-5**
Complete your health forms, register your kit, collect your sample, and mail it back.
- 4 Meet your dietitian** **DAY 10**
Review your personalized results with an oncology-trained dietitian and build your plan together.
- 5 Your follow-up** **DAY 30-40**
Check in, fine-tune what's working, and adjust your plan as needed.
- 6 Ongoing membership** **\$99/MO**
Ongoing dietitian support, fresh recipes, and featured monthly topics.

\$499 to start | **\$99** /month

A NOTE FROM THE FOUNDER

The microbiome is a remarkable and complex part of human biology. We began with the idea that the gut microbiome could meaningfully support people during their cancer journey. After years of working with this science, we learned that interpretation is the missing piece. Our role is to provide microbiome-informed nutrition guidance, paired with the expertise of oncology-trained registered dietitians — professionals who spend years studying how food supports the body. "Food as Medicine" may be a modern phrase, but Hippocrates said it long ago: "All disease begins in the gut." Who better to guide you than a dietitian trained specifically in cancer care?

Nutrition has been overlooked for too long, yet research continues to show that preparing the body with diet and exercise can improve how treatment is tolerated. We won't claim to have everything figured out — the science is evolving, and we evolve with it. Our microbiome tools improve continuously as new data emerges. While many microbiome components show promise, harnessing them in cancer care is still early. We integrate the best available evidence to support your nutrition, keeping your gut microbes in mind. We welcome you into this journey of discovery. Our promise is simple: we will keep improving, keep learning, and pass those benefits on to you.

— Michael A. Liss, MD, PhD, MAS, MBA

Rebiomix is a wellness service that supports personalized nutrition alongside your registered dietitian and care team. It is not a diagnostic test and is not intended to diagnose, treat, cure, or prevent any disease. Always follow the guidance of your medical team.

ONCOBIOMIX

I've got cancer — what should I eat?

Personalized, microbiome-informed nutrition — paired with an oncology-trained dietitian.

Your microbiome. Your plan. Proactive.

www.oncobiomix.com

HOW IT WORKS

Simple process, keeping it human.

Complete your kit and meet with a live registered dietitian.

1 ASSESS

Your current diet survey.

2 ANALYZE

Your microbiome test + RebiomiX analysis.

2 EXECUTE

Your dietitian interprets both together.

3 DELIVER

Your personalized nutrition plan + a report sent to your doctor.

Your doctor stays in the loop.

THE GUT MICROBIOME

Meet the trillions of helpers in your gut.

Your gut is home to trillions of tiny, mostly-helpful organisms — your **microbiome**. Every day they turn the food you eat into health.

The microbiome turns food into health.

During cancer care, this community can shift — influencing how you feel and how your body handles treatment.

REBIOMIX READS IT

From one simple at-home sample, RebiomiX sorts your gut into one of six groups:

- Biome Balanced
- Low SCFA Producer
- Barrier Impaired
- Low Diversity
- Overgrowth
- Inflammatory

PUTTING IT ALL TOGETHER

We combine your gut microbiome with your current nutrition — then, using **AI** and your **dietitian**, we build a plan that's truly unique to you.

WHY IT MATTERS

Guided by evidence, built around you.

A growing body of research links what you eat to how you feel — and how well treatment is tolerated. Here's some of what it shows:

SHOWN TO Personalized nutrition during treatment can improve quality of life and treatment tolerance. (Ravasco et al.) This study showed meaningful improvements — though it did not yet use microbiome data for precision nutrition.

LINKED TO A diverse, fiber-rich diet is associated with stronger responses to immunotherapy. (Spencer et al., Science 2021) Different fibers support different microbes — and your dietitian can help you understand which matter most for you.

STUDYING Whether microbiome-guided nutrition improves these outcomes — our ongoing GLOW study. We'll follow up with you to understand how proactive, precision nutrition affects your journey.

Your dietitian, with a clearer view.

RebiomiX gives your registered dietitian a personalized read of your gut — so the plan you build together is truly made for you.

A note on supplements: If you're on immunotherapy, check with your care team before starting any probiotic supplement.

RebiomiX is the only microbiome-informed nutrition program built specifically for cancer care, pairing at-home gut analysis with oncology-trained dietitians to deliver precision nutrition that supports treatment tolerance, immune resilience, and patient well-being.

Research cited refers to nutrition and diet generally, not to RebiomiX outcomes. RebiomiX is a wellness tool that supports your dietitian; it is not a diagnostic test. Gut-group descriptions reviewed by our oncology RD.
